

ABSTRACT

To provide an electronic appliance not only capable of displaying a message but also interesting to children
5 in early childhood and to realize an electronic appliance to which an improved function can be added according to the growth of a child.

A pager unit 1 and an adapter unit 21 to which the pager unit 1 can be detachably attached are provided.
10 The pager unit 1 has a liquid crystal display device 17 for notifying when a message is received, and a microcomputer 7 which transfers the received message to the adapter unit 21. The adapter unit 21 has a microcomputer 27 which receives the transferred message,
15 and a speaker 35, a liquid crystal display device 43 and a motor driver circuit 45 each of which notifies the reception of the message.
